

Agenda Item 2

Featured Start-Up – SecondWrite, LLC

BOARD OF REGENTS

SUMMARY OF ITEM FOR ACTION INFORMATION OR DISCUSSION

TOPIC: Featured Start-Up – SecondWrite, LLC (information item)

COMMITTEE: Economic Development and Technology Commercialization

DATE OF COMMITTEE MEETING: June 19, 2014

SUMMARY: SecondWrite, a company founded by a faculty member from UMCP, has been selected as the featured start-up for the June 19th Committee meeting. Its technology improves computer performance and security.

SecondWrite, LLC, has licensed the first static binary rewriting technology that rewrites binaries without relocation of symbolic information. The software provides wholesale recompilation of the binary including redoing register allocation and instruction selection. The resulting advantages of this novel static binary rewriter are rewriting 100% of binary code with relatively no run-time increase, enforcing security on untrustworthy program codes, bypassing malicious codes hidden in the software, and rewriting obfuscated binary code, thereby preventing future obfuscator use.

ALTERNATIVE(S): This item is for information purposes.

FISCAL IMPACT: This item is for information purposes.

CHANCELLOR'S RECOMMENDATION: This item is for information purposes.

Need for APM in real-world

The cost of data center downtime has increased significantly since 2010.

The average cost per minute increased 41 percent from:

\$5,617 to \$5,617 to \$7,908 in 2013

What is APM?

GOALS

- Automatically detect slowdowns and timeouts.
- Automatically pin-point the location of the problem.

MARKET

- > \$2.1 B/year
- > \$4-5 B/year in next 5 years

EXISTING SOLUTIONS

Only supports interpreted code

> JAVA, .NET

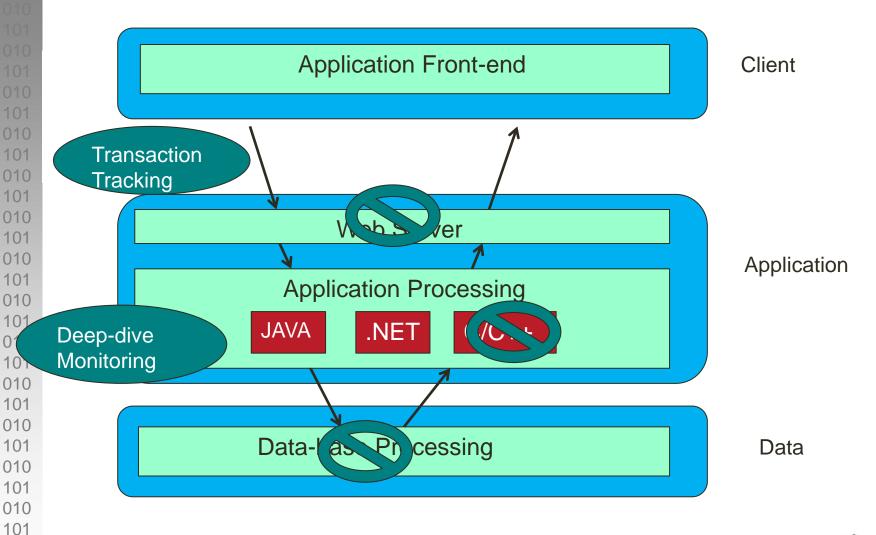

No visibility inside binary code C,C++
